

PRODUCT INFORMATION SHEET

Brushless cordless lawnmower 43 cm 2x18V

Product description

The Högert HT2E288-0LM218V43 cordless lawnmower is designed for the comfortable care of small to medium-sized home lawns. The device operates on the **OneAccuSystem 18V** system, but **two 18V batteries are required for power**, which allows you to obtain adequate power and stability of operation when mowing larger areas. Battery power eliminates the need for a cord, giving you the freedom to manoeuvre and have full control over your entire garden.

The cutting width of 43 cm allows for efficient mowing of larger sections of the lawn while maintaining good maneuverability of the device. The central cutting height adjustment allows you to quickly adjust the length of the grass to the weather conditions, the season and the preferred visual effect of the lawn.

The lawnmower is equipped with a capacious grass catcher, which limits the frequency of emptying and allows you to work smoothly without unnecessary interruptions. The stable construction and ergonomic guide handle increase the comfort of work and make it easier to drive the device even on uneven terrain.

The safety systems used, including a start switch and protection against accidental switch-on, increase control over the device and the safety of the user during operation. The HT2E288-0LM218V43 is designed for personal and hobby use – where portability, ease of use and reliability are important.

Technology and performance

The use of two 18 V batteries allows for stable operating characteristics and adequate power for mowing grass on larger areas. The electric drive ensures quieter operation compared to petrol lawn mowers and no exhaust emissions, which increases the comfort of use in home gardens.

System advantages

The OneAccuSystem 18V platform allows the same batteries to be used in many Högert power tools. This is a real cost saving, storage space and greater flexibility in everyday work. Battery and charger available for purchase separately.

Warranty

3 years of protection with Door to Door Service – less downtime and longer lifespan.

Characteristics

- cutting width 43 cm – good performance while maintaining maneuverability,
- central cutting height adjustment – quick adaptation to lawn conditions,
- capacious grass catcher – less frequent emptying and smooth operation,
- ergonomic guide handle – better control and comfort of use,
- stable construction – confident handling on various surfaces,
- security system – protection against accidental start-up of the device.
