

Opis Produktu

OneAccuSystem 18V cordless chainsaw Cordless chainsaw designed for garden and home work, such as pruning branches, cutting firewood or cleaning work around the property. Battery power eliminates the need for a cord, ensuring full mobility and convenience wherever you are. The saw is equipped with a 250 mm long guide that provides good cutting control and is suitable for typical garden work. The chain speed of 12 m/s allows for efficient and effective cutting, and the automatic lubrication system ensures the proper operation of the cutting system and extends the service life of the guide and chain. The tool-free chain tensioning system allows you to quickly and conveniently set the correct tension without the use of wrenches, which facilitates ongoing operation and improves work safety. The design of the device is designed with user safety in mind. The saw has both a chain brake and a run-down brake, which perform different, complementary protective functions. Additional safeguards include a trigger lock and systems that protect the motor and battery from overload and overheating. The lightweight and compact design makes it easy to manoeuvre the tool, reduces operator fatigue and allows you to work precisely even in hard-to-reach areas. Safety systems: Chain brake - this is a mechanical safety system that immediately stops the chain in the event of a kickback or when the hand guard is manually activated. It works independently of the electronics and is designed to protect the user in emergency situations when the saw changes position abruptly. Run-out brake - this is an electronic system that stops the chain when the trigger is released, shortening the time of its free run. Unlike a chain brake, it does not react to rebound, but increases safety during normal operation, e.g. when putting the saw down or changing positions between cuts. Difference between the systems: chain brake → emergency protection, reacting to rebound or manual starting, Run-out brake → a working lock, reducing the time the chain stops after the trigger is released. Both systems operate independently and complement each other. Technology and performance: The optimised design, brushless motor and battery drive ensure stable work. System advantages: The OneAccuSystem 18V power supply allows you to use a single battery in a wide range of garden and workshop power tools, increasing mobility and reducing operating costs. Battery and charger available for purchase separately. Warranty: 3 years of protection with Door to Door service – less downtime, more convenience of use and longer lifespan of the device.

Charakterystyka

- tool-free chain tensioning – quick adjustment without tools.
- brushless motor,
- 250 mm guide – optimal for garden work,
- chain speed 12 m/s – efficient and effective cutting,
- automatic chain lubrication – smooth operation of the cutting system,
- 120 ml oil tank – less frequent refilling,
- chain brake – protection in emergency situations,
- run-out brake – quick stop of the chain after releasing the trigger,
- trigger lock – protection against accidental starting,
- motor and battery protection systems against overload and overheating,
- Lightweight and compact design – easy manoeuvrability and less fatigue.
