

## Blower 18V

### Product description

The Högert HT2E291-0BL cordless blower is designed for quick and convenient cleaning of the garden, driveway, terrace and other areas around the house. The 18V battery power eliminates the need for a cable, ensuring full mobility and freedom of work anywhere on the property. The device generates an air velocity of up to 144 km/h and a flow rate of 570 m<sup>3</sup>/h, which allows you to effectively remove leaves, dust and light debris. In situations requiring more blowing force, the user can use the Turbo mode, which increases the intensity of work and makes it easier to clean more difficult areas, such as corners by fences or the edges of pavements. The blower is designed with user comfort in mind. The low vibration level (ah 2.5 m/s<sup>2</sup>) and moderate noise level allow you to work longer without excessive fatigue. The ergonomic design makes it easy to guide the tool and direct the airflow precisely. The safety features used protect both the device and the battery from overload and overheating, which translates into greater durability and reliability during everyday use. The HT2E291-0BL is designed for private and hobby use – ideal for users who are looking for a lightweight, mobile alternative to corded and petrol blowers. Technology and performance: The control electronics used ensure stable operation of the motor and efficient use of battery energy. The OneAccuSystem 18V power supply guarantees compatibility with a wide range of Högert power tools. A single battery can power multiple devices, simplifying workflow and reducing the cost of additional batteries.

Battery and charger available for purchase separately.

Warranty: 3 years of protection with Door to Door service – less downtime and the certainty of long, trouble-free operation.

### Characteristics

- Air speed up to 144 km/h – effective removal of leaves and light debris.
- Capacity 570 m<sup>3</sup>/h – fast cleaning of larger surfaces.
- Turbo Mode – extra power for tougher tasks.
- Low vibration (ah < 2.5 m/s<sup>2</sup>) – more comfort during longer working hours.
- Ergonomic design – easy manoeuvrability and precise airflow steering.
