

Opis Produktu

The Högert HT2E294-0BV vacuum cleaner blower is designed for the efficient removal of leaves and light garden waste around the house and garden. The 2x18V battery power supply provides full mobility and freedom of work without the restrictions resulting from the use of a power cord, which makes it especially easy to tidy up larger properties, driveways or terraces.

The device operates in blower or vacuum cleaner mode, allowing you to quickly switch functions depending on your current needs. **Variable speed from 8000 to 13000 rpm** allows you to precisely adjust the blowing or suction force to the amount and type of debris – from light leaves to small branches and grass residues. In vacuum cleaner mode, the collected material goes into **a bag with a capacity of approx. 45 liters**, which reduces the frequency of emptying and improves work.

For greater user comfort, the blower is equipped with **travel wheels and a carrying strap** that relieve the strain on the hands and back during longer cleaning work. Low vibration and controlled noise levels increase the comfort of use, while integrated safety features protect the device and battery from overload, overheating and undervoltage.

The HT2E294-0BV is designed for private and hobby use – it is a practical solution for users who are looking for a single, versatile tool for seasonal garden cleaning.

Technology and performance:

The control electronics used ensure stable operation of the brushless motor and efficient use of battery energy. The run-up brake is responsible for quickly braking the rotor when the device is switched off, which increases the safety of use and allows you to put the tool down faster when you are done with work.

System advantages:

The OneAccuSystem 18V power supply guarantees compatibility with a wide range of Högert power tools. A single battery can power multiple devices, simplifying workflow and reducing the cost of additional batteries.

The scope of delivery includes a 2 x 4 Ah battery (HT2E240-A40) and a 4A charger DUO (HT2E283-DC8).

Warranty:

3 years of protection with Door to Door service – less downtime and the certainty of long, trouble-free operation.

Charakterystyka

- 2-in-1 function – blower and vacuum cleaner – one device for blowing and collecting leaves.
- Variable speed 8000-13000 rpm – matching the working force to the type of contaminants.
- Air speed up to 210 km/h – effective removal of leaves and light debris.
- Suction power of 720 m³/h – efficient collection of shredded material.
- Collection bag approx. 45 l – less frequent emptying and smooth operation.
- Shredding function.
- Castors and carrying belt – easier manoeuvring and less strain during operation.
- Brushless motor.
- Low vibration (ahv 2,354 m/s²) – more comfortable use.
